Discoverer Replacement

Table of Contents

Looking for a Discoverer Replacement as you upgrade to EBS 12.2? Orbit offers a compelling solution.

04

Oracle Discoverer has Reached its End-of-Life

05

Take Advantage of Self-Service Reporting and Analytics

06

Seamless Migration of Your Old Discoverer Reports

07

An Easy-to-Use Ad-Hoc Reporting Tool

08

Data Governance Aligned with EBS

09

Managed Migration with Conversion Utility

Oracle Discoverer has reached its End-Of-Life

Oracle has discontinued its extended support for Discoverer. Oracle will no longer provide bug fixes and patches, as well as certifications with Oracle products, web browsers, or operational systems.

If you have not yet replaced Oracle Discoverer with a new reporting platform, you are putting yourself at risk.

Take Advantage of Self-Service Reporting and Analytics

With Orbit, you do not need to rely on IT every time you want to run or modify a report. Once your Discoverer reports are converted, you can enjoy our **self-service** reporting features!

You can also create visualizations such as charts, graphs, and maps that help you quickly and easily interpret raw data from Oracle EBS or other sources. Drill downs, exporting, and scheduling are also included in this self-service feature!

Seamless Migration of Your Old Discoverer Reports

A true replacement for Discoverer for EBS, Orbit comes with an Oracle Discoverer migration assistant that converts all the Discoverer reports quickly and accurately -- saving time, cost, and money.

Here at Orbit, we integrate with Oracle EBS for a seamless reporting and complete Discoverer migration and replacement!

An Easy-to-Use Ad-Hoc Reporting Tool

Like Discoverer, Orbit is an ad-hoc query and analysis reporting tool. Being an Oracle integrated tool, it can access all of your data from EBS and can work with other data sources and ERP systems.

Data Governance Aligned with EBS

Orbit mirrors the security and governance definitions of Oracle EBS, thereby automatically synchronizing with EBS Responsibilities and User Authentication.

Managed Migration with Conversion Utility

Businesses find upgrading to be a hectic task and time consuming for their resources. The Orbit team can take complete responsibility for migrating the reports during the upgrade, leaving the customer's team to focus on the upgrade itself.
